Lifetime℠ (patent pending), the premier web-based platform for Continuous Performance Improvement and Lifelong Learning, is the first in a new class of healthcare information technology called P.E.O.P.L.E.™ (Performance, Education and Outcomes, Professional Learning Environment).

Lifetime’s suite of integrated modules offers health care providers a personal, integrated view of their “world”; allowing them to continuously identify, track and assess gaps in performance, knowledge and competency, with links to interventions and plans of action that drive improvement and lifelong learning, just a click away.

Each health care professional’s Lifetime account is focused on the individual, but the true power of the Lifetime platform is unleashed when coupled with the built in Web 2.0 community networking tools. These modules allow organizations to launch patient registries, performance improvement and lifelong learning initiatives, both within and across complex organizations, to create virtual Communities of Practice and Communities of Learners, where multidisciplinary teams can improve performance, quality and patient outcomes in unison and in real-time.

Lifetime Solutions include:

- Maintenance of Certification Part II and Part IV
- Performance Improvement Programs
  - Continuous Performance Improvement
  - Performance Improvement CME (PI-CME)
  - Never events, medication compliance, and more
- Patient/Disease/Product/Measurement Registries
- Pay for Performance
  - Lifetime Registry℠ is approved by CMS for PQRI
- Physician-Centered Medical Home
- Lifelong Learning Portfolio
- Patient Outreach, Outcomes and Performance Programs
  - Survey, Safety, & Patient Centered Medical Home

Lifetime P.E.O.P.L.E. Dashboard

Presents a snapshot of the user’s personalized portfolio, including key performance indicators and professional information, across Lifetime modules.
The *Lifetime Suite* is comprised of a series of scalable, secure, and extensible applications that may be implemented standalone or as interlocking modules, including:

**Lifetime “P.E.O.P.L.E” Dashboard** – *Lifetime’s P.E.O.P.L.E. Dashboard* offers the health care professional their own medical home; providing a personal window through which data, key performance, education, outcomes, personal and professional information is presented as a concise portfolio.

**Registry** – *Lifetime* supports data collection to drive performance measurement from multiple sources, including web-based chart abstraction (retrospective), registry (prospective), and integrated data feeds from 3rd party database systems (EMR, Health Plan, etc.).

**Performance Assessment and Improvement** – *Lifetime* fully automates the performance assessment and improvement cycle. Easy to use navigation guides the user step-by-step as they discover performance gaps linked to individualized pathways for performance improvement. The included performance dashboard and monitor enables an environment for continuous self-assessment, measurement/re-measurement, comparison (vs. peers, benchmarks, and goals), reflection and improvement.

**Performance Program Pipeline** – *Lifetime* can be connected to the world of P4P, recognition and other value-based performance programs, to maximize the value to the organization and the health care professionals.

**eLearning** – A complete learning management system is self-contained within the *Lifetime* platform to allow users to seamlessly access online learning interventions.

**Community & Social Networking** – This module allows both organizations and individual users to create their own custom Communities of Practice and Learners, in which group registries, shared curriculum, analysis, and performance improvement can be realized.

**ePortfolio** – ePortfolio provides the health care professional with a home where their lifelong learning planning, requirements, intentions, interventions, contributions, reflections, documents, and success, can be collected, tracked, managed and shared.

**Patient Assessment and Outreach** – *Lifetime* supports bi-directional patient interaction. Patient surveys via web and IVR are available to create 360 degree performance assessments. Outreach to patients, based on measure and registry alerts, can also be enabled, to support patient quality and medical home initiatives.

**Connects With Other CECity Technology Products**

- **CME360.net®** - CME360 complements your Lifetime portal, providing a collaborative platform for activity planning and development (CME/CE, eLearning, assessments, and PI modules), publishing, reporting & outcomes.
- **VelocitySM** - Link to your standalone Velocity eLearning portal.
- **CentricitySM** - Share and license your content across CECity; the largest network of CME/CE and Performance Portals.
